

Make your own *T. rex* mask!

Did you know?

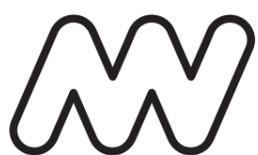

- *Tyrannosaurus rex* skulls are wide at the rear with a narrow snout
- *T. rex* eyes faced forward. Good binocular vision is important for a predator!
- *T. rex* skull bones are massive, but had a 'honeycomb' of tiny air spaces, meaning the bones were light but strong
- Like other members of the Tyrannosauridae family, *T. rex* had an incredibly powerful bite – the strongest bite of any land animal that ever lived

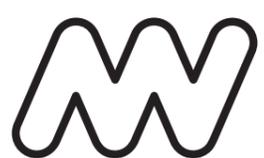

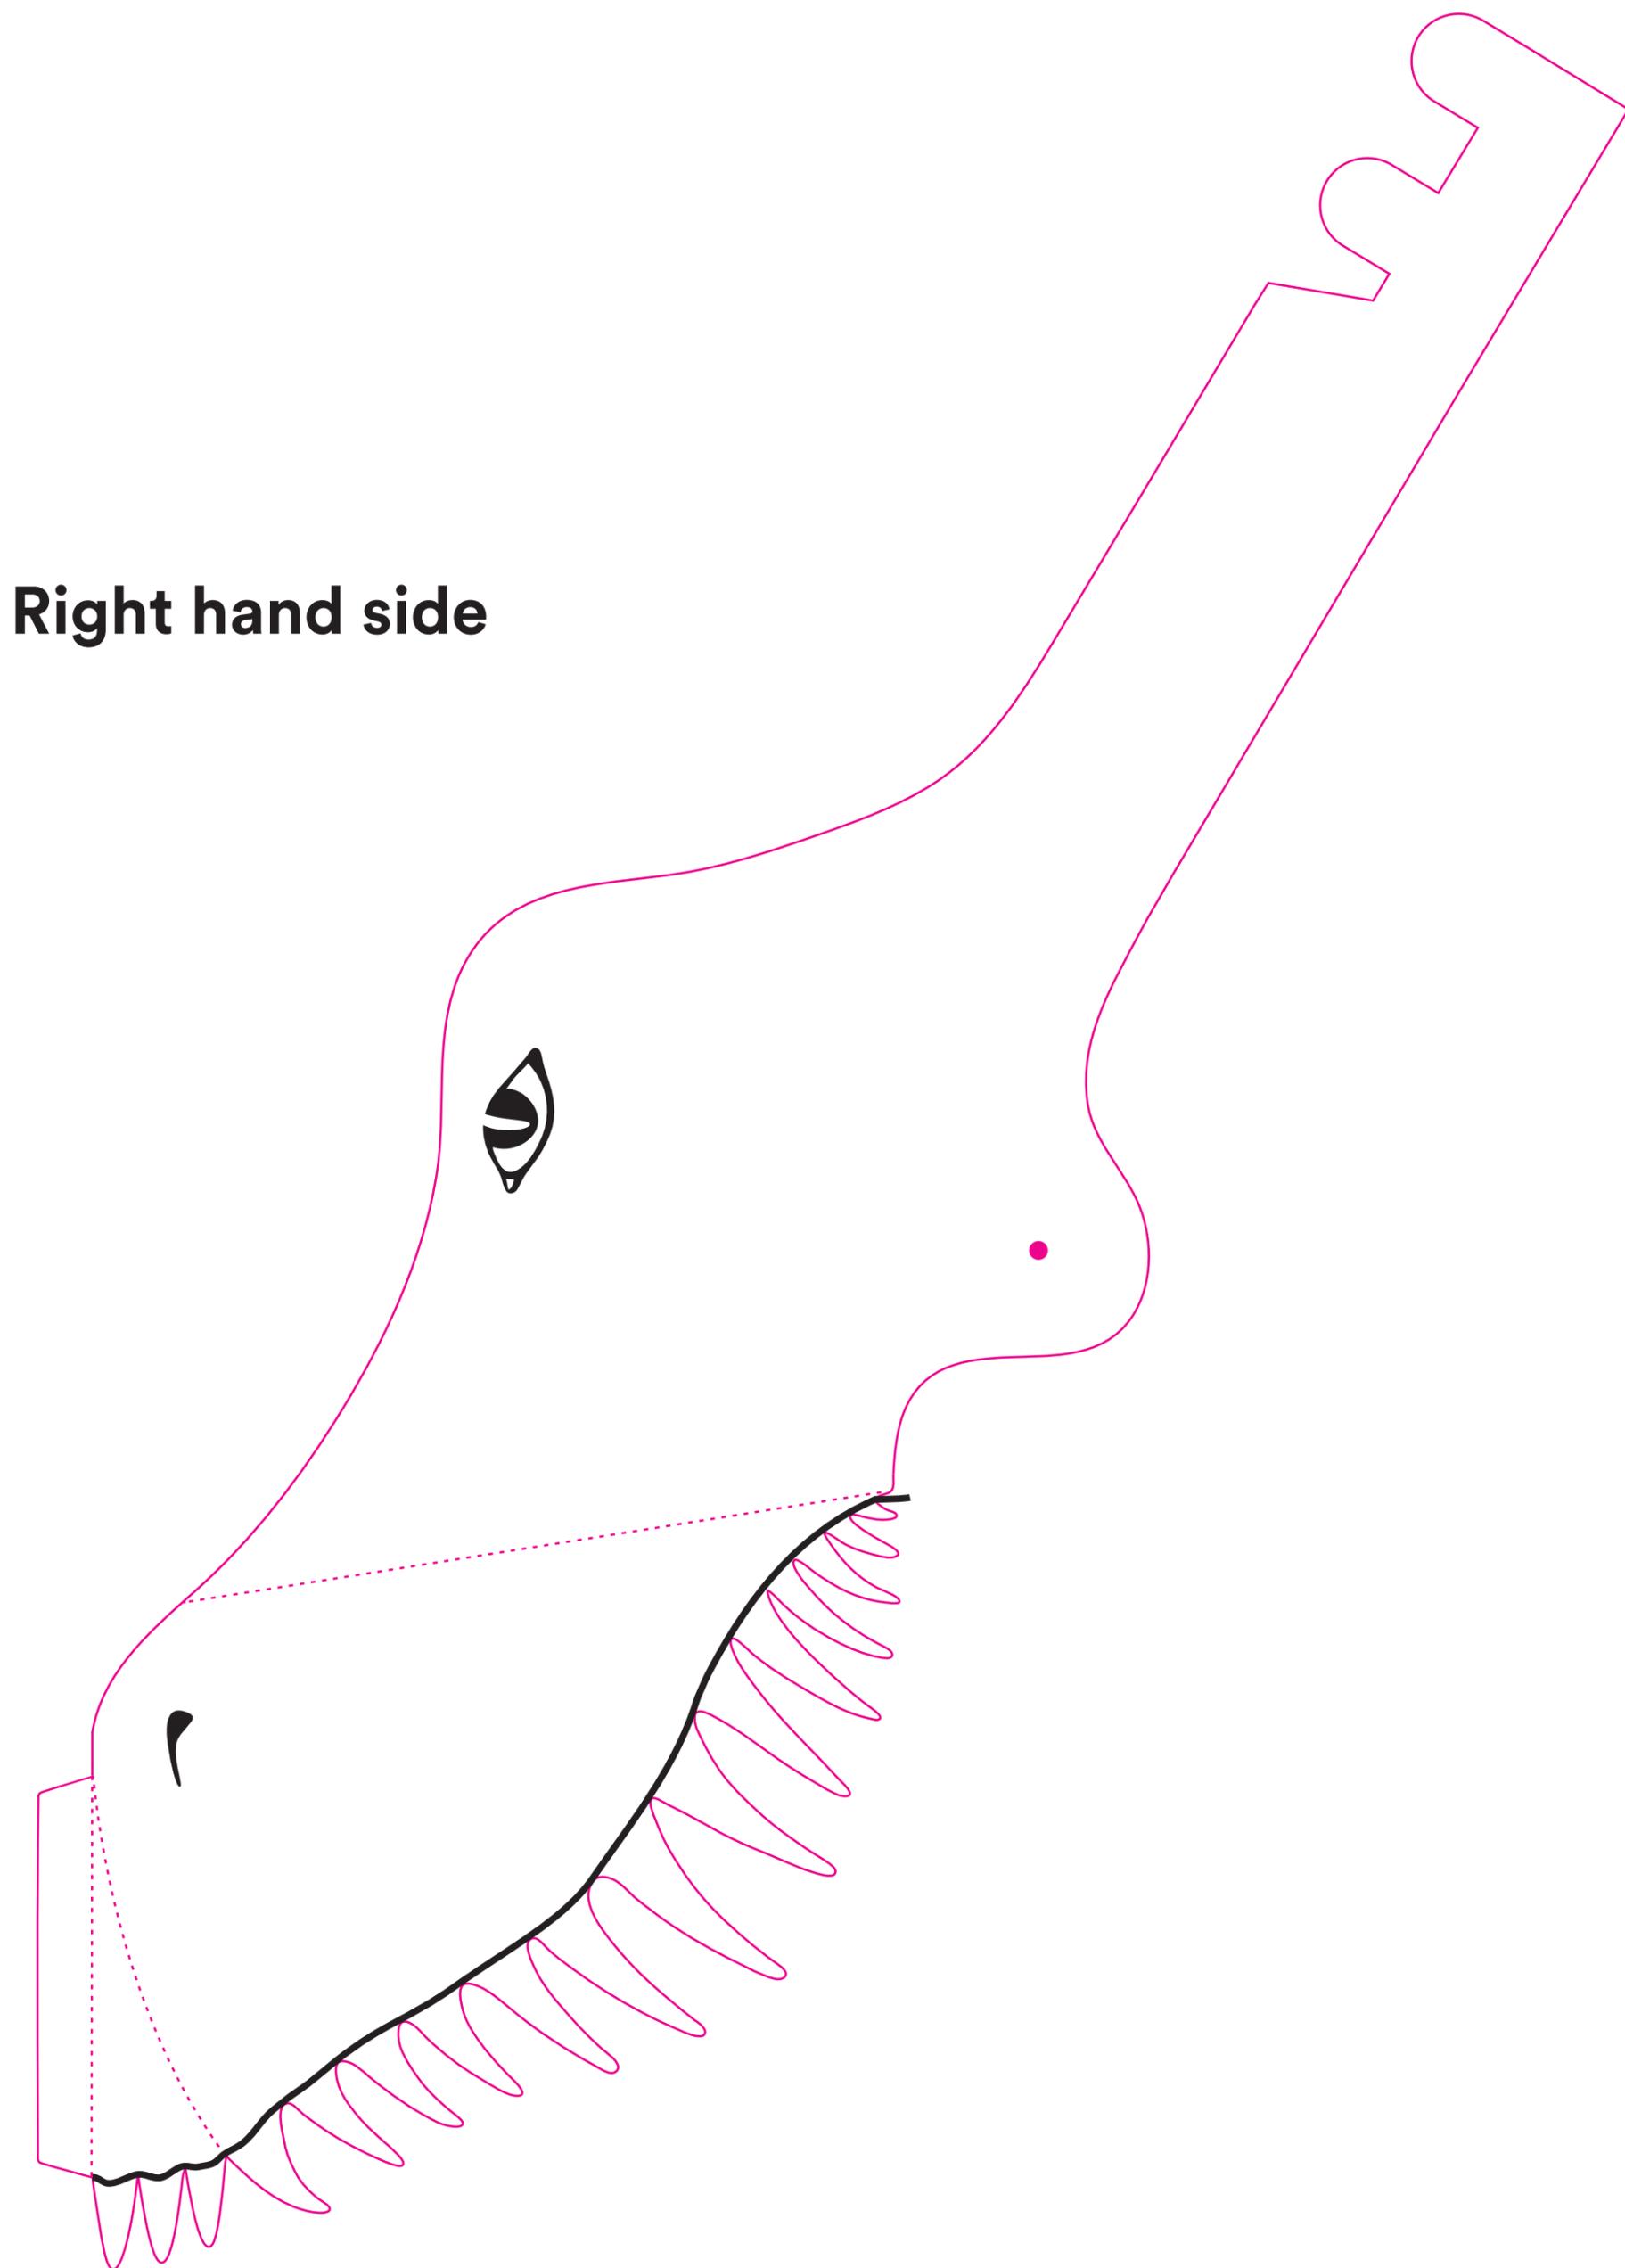

Left hand side

Key

- Cutting line
- ⋯ Fold/score
- 3mm hole punch

Right hand side

Lower jaw
