

Design an alien

Teacher notes

- 1 Research information about the planets in our Solar System and choose your favourite planet.
- 2 By referring to the specific information you researched about this planet, write down specific features that your alien will need to survive on this planet.
 - How and what will it eat?
 - How will it move?
 - How will it communicate?
 - Where will it live?
 - How will it protect itself from the weather conditions on this planet?
- 3 Name and draw your alien, labelling all the special features you have identified below.
- 4 Make a model of your alien using bits and pieces around the house, (eg Lego pieces, recyclable materials or any other building materials you may have).
- 5 Choose another planet and think about how the features of your alien would have to change if it suddenly had to migrate to this new planet.
